

Jeffrey Liang

+1 (401)-749-8394 | 21 Euclid Ave, Providence, RI 02906 | jeffreymingliang@gmail.com

Education

Brown University, *GPA: 3.87/4.0 | SAT: 1560*

Class of 2027 | Providence, RI

- Bachelor of Science (Sc.B.) - Computer Science & Economics
- Relevant coursework: Data Science, Deep Learning, Machine Learning, Computer Networks, Designs and Algorithms, Intermediate Mathematical Microeconomics, Investments II, Financial Accounting

Work Experience

JPMorgan Chase, *Incoming Equity Capital Markets Summer Analyst (Technology)*

Start Jun. 2026

Wlckthru, *Software Engineer Intern*

Jan. 2026 - April. 2026

- Built server-side WebRTC infrastructure using Mediasoup SFU with integrated recording pipeline (PlainTransport → FFmpeg) deployed on VPS
- Developed AI-powered summarization system with structured extraction integrated into external CRM systems
- Implementing low-latency (<5s) live Spanish ↔ English audio translation pipeline for in-call communication

Voyager Capital, *Technical Analyst Intern*

Jun. 2025 - Aug. 2025

- Built OCR and LLM-based pipelines for legal document processing to support investment diligence
- Orchestrated automated workflows using n8n to chain extraction, summarization, and data structuring steps
- Assessed LLM inference across models and parameter settings, analyzing tradeoffs in output quality and latency

Xiaomi Technology, *Algorithm Engineer Intern*

Jun. 2024 – Aug. 2024

- Evaluated video generative models, analyzing quality, latency, and bandwidth tradeoffs for mobile deployment
- Formed 4 technical reports on the fundamental strengths within models, methods for inference improvement
- Built lightweight evaluation tooling (e.g., LlamaIndex-based pipelines) to support model comparison and testing
- Established an approved company project "On Device AI Accelerator" targeting AI specific hardware techniques

Extracurricular Involvement

[Beya: Small Business Assistance App](#), *Technical Development Lead*

Sep. 2024 – April. 2025

- Led end-to-end development of a B2B mobile app for small businesses, generating \$22K+ ARR
- Designed core platform features; proximity discovery, payments, and inventory management for 20+ vendors
- Built serverless payment backend with AWS Lambda to process Stripe webhooks and update transactions
- Integrated Apple Tap-to-Pay for in-app contactless payments and supported official App Store release

[PartSelect Agent](#), *Individual Contributor*

May. 2026

- Hand-rolled an agentic loop from scratch with dual MCP servers separating SQL and vector retrieval
- Built a resumable Playwright scraper with anti-detection, deduplication, and crash recovery across 5,000+ parts
- Designed a dual-layer eval harness with deterministic tool-routing checks and LLM-as-judge rubric scoring
- Shipped a full-stack product with a FastAPI backend and React chat UI featuring real-time part cards and repair guide rendering

[Pitch Recognition and Note Detection From Sheet Music](#), *Researcher*

Feb. 2025 – May. 2025

- Built a CV + CNN pipeline to extract noteheads pitch from sheet-music PDFs (5,218 images, 44 songs)
- Applied morphological filtering and watershed segmentation to separate overlapping symbols
- Trained regularized binary CNNs, converging in ~25 epochs to ~90% detection accuracy using dropout and L2 reg

Awards & Publications

[Publication by The Journal of Applied Mathematics and Computation](#)

Jun. 2023

- Modeling energy-based transportation networks via gradient flow dynamics and numerical optimization

Skills & Interests

- Technical skills: Python, C++, JavaScript, Swift, TensorFlow, React, Expo, AWS, Firebase, MySQL
- Languages: English, Chinese (Native proficiency)
- Interests: Tennis, Personal Fitness, Short Fiction Writing, Card Games & Probability Theory
